User Requirements				
ID	Requirement	Topic Area	Actor	Priority
UR-07	Customer can transfer money from checking and savings account	Business	Customer	Medium
UR-08	As a customer, I want to transfer money to other customer's accounts. So as to transfer money to friends and creditors.	Business	Customer	Medium
UR-01	Customers can register with initial savings account	Business	Customer	High
BR-01	Customer account created only after Manager's approval	Business	Manager	Medium

ID	UR-07
Name	Transfer Money Between Accounts
Description	Customer can transfer funds between one checking or savings account into another checking or saving account.

Actors:	Customers														
Pre Conditions:	Customer wants to transfer money between their accounts.														
Post Conditions:	The money is transferred between the accounts.														
Frequency:	A regular but variable occurrence but probably only happens a few times a month for each customer.														
Flow of Events:	<table><tr><th>Step</th><th>Actor Action</th><th>System Response</th></tr><tr><td>1</td><td>Customer Logins</td><td>Customer is granted access to accounts.</td></tr><tr><td>2</td><td>Customer Choses Account to Transfer From and To and the amount that is to be transferred</td><td>System is able to find the accounts and see the funds are available.</td></tr><tr><td>3</td><td>Customer Authorizes the Transfer</td><td>The System Transfers the money and takes the Customer back to where they accessed their accounts.</td></tr></table>			Step	Actor Action	System Response	1	Customer Logins	Customer is granted access to accounts.	2	Customer Choses Account to Transfer From and To and the amount that is to be transferred	System is able to find the accounts and see the funds are available.	3	Customer Authorizes the Transfer	The System Transfers the money and takes the Customer back to where they accessed their accounts.
Step	Actor Action	System Response													
1	Customer Logins	Customer is granted access to accounts.													
2	Customer Choses Account to Transfer From and To and the amount that is to be transferred	System is able to find the accounts and see the funds are available.													
3	Customer Authorizes the Transfer	The System Transfers the money and takes the Customer back to where they accessed their accounts.													
Variations:	1. The Customer is denied access because of wrong credentials.														

	2. There isn't enough money to be transferred between accounts.

ID	UR-08
Name	Transfer Money To An Account of Another Customer
Description	As a customer, I want to transfer money to other customer's accounts. So as to transfer money to friends and creditors.

Actors:	Customers											
Pre Conditions:	Customer wants to transfer money to another customer's account.											
Post Conditions:	The money is transferred between the accounts.											
Frequency:	A regular but variable occurrence but probably only happens a few times a month for each customer.											
Flow of Events:	<table><tr><th>Step</th><th>Actor Action</th><th>System Response</th></tr><tr><td>1</td><td>Customer Logins</td><td>Customer is granted access to accounts.</td></tr><tr><td>2</td><td>Customer Choses Account to Transfer From and To and the amount that is to be transferred. Also chooses the customer of whom's account shall receive money. They cannot transfer from another customer's account.</td><td>System is able to find the customer, the account of both from and to and see the funds are available.</td></tr></table>			Step	Actor Action	System Response	1	Customer Logins	Customer is granted access to accounts.	2	Customer Choses Account to Transfer From and To and the amount that is to be transferred. Also chooses the customer of whom's account shall receive money. They cannot transfer from another customer's account.	System is able to find the customer, the account of both from and to and see the funds are available.
Step	Actor Action	System Response										
1	Customer Logins	Customer is granted access to accounts.										
2	Customer Choses Account to Transfer From and To and the amount that is to be transferred. Also chooses the customer of whom's account shall receive money. They cannot transfer from another customer's account.	System is able to find the customer, the account of both from and to and see the funds are available.										

	3	Customer Authorizes the Transfer	The System Transfers the money and takes the Customer back to where they accessed their accounts.	
Variations:	<ol style="list-style-type: none"> 1. The customer the customer wants to give money to doesn't exist in the system 2. They can't log in with their credentials. 3. There isn't enough money to be transferred from their account to another. 			
Exceptions:	The customer may transfer from another account if they are also on the other account they are transferring from. This would be functionally the same as transferring between two accounts owned by the same customer.			
Developer's Notes:				

ID	BR-01
Name	Account Approval
Description	Customer Account Only Created After Manager Approval

Actors:	Customers and Managers														
Pre Conditions:	Customer wants to join the bank.														
Post Conditions:	The manager either allows the customer to join or doesn't														
Frequency:	Once for each customer. Frequent on system.														
Flow of Events:	<table><tr><th>Step</th><th>Actor Action</th><th>System Response</th></tr><tr><td>1</td><td>The Manager logs in</td><td>The System takes Manager to Management area</td></tr><tr><td>2</td><td>The Manager pulls up the stored registration</td><td>The system prompts the manager to make an election upon the chosen registration.</td></tr><tr><td>3</td><td>The manager makes the election</td><td>The System either creates the customer or not.</td></tr></table>			Step	Actor Action	System Response	1	The Manager logs in	The System takes Manager to Management area	2	The Manager pulls up the stored registration	The system prompts the manager to make an election upon the chosen registration.	3	The manager makes the election	The System either creates the customer or not.
Step	Actor Action	System Response													
1	The Manager logs in	The System takes Manager to Management area													
2	The Manager pulls up the stored registration	The system prompts the manager to make an election upon the chosen registration.													
3	The manager makes the election	The System either creates the customer or not.													
Variations:	1. The Manager has incorrect credentials and can't log in.														

Exceptions:	
Developer's Notes:	

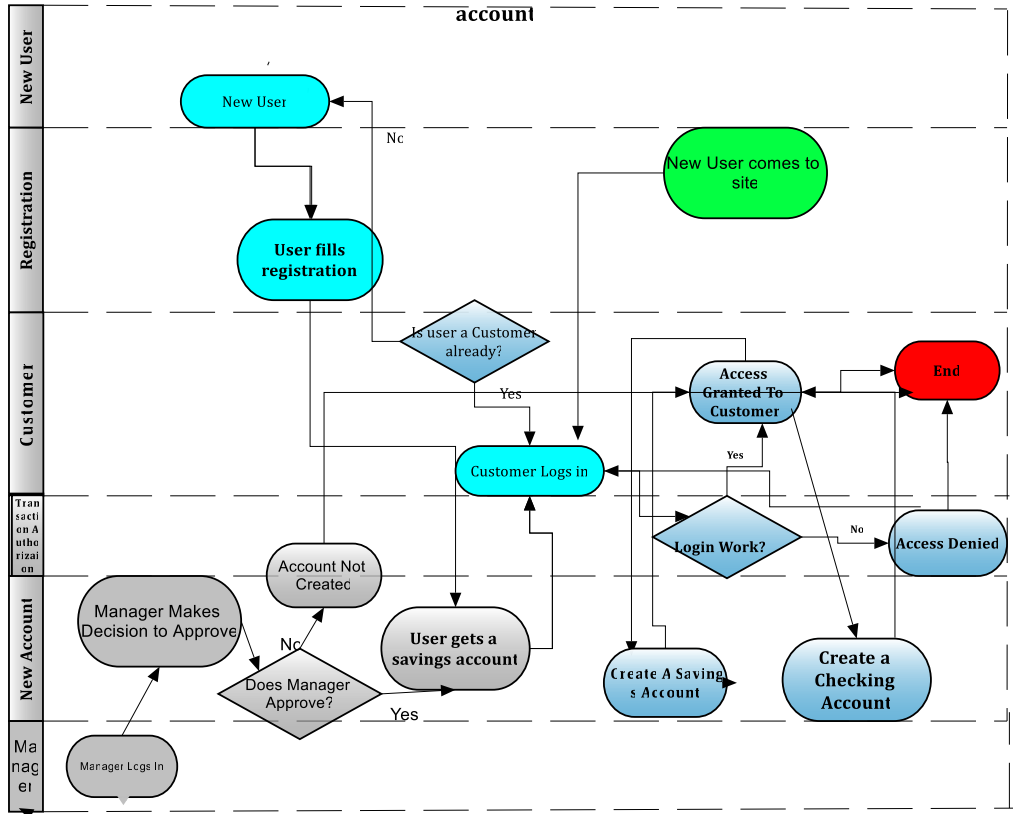

ID	UR-01
Name	Manager can accept/deny loan application
Description	Managers renders a decision either to accept or deny a loan application.

Actors:	Customer														
Pre Conditions:	A customer wants to open an account.														
Post Conditions:	The customer is a customer of the bank.														
Frequency:	An occasional occurrence
